

ABSTRACT OF THE DISCLOSURE

A subscriber profile changing method etc. is provided. While a mobile terminal 110 is present in a service area of an exchange 131, a subscriber profile is changed only
5 in the exchange 131. When the mobile station 110 moves to a service area of an exchange 132, a home memory station 120 requests the exchange 131 to delete the subscriber profile of the mobile terminal 110. Before deleting the
10 subscriber profile, the exchange 131 checks a flag to see whether or not the subscriber profile was changed while the mobile terminal 110 was present in the service area of the exchange 131. If the subscriber profile has been
15 changed, the exchange 131 sets the changed subscriber profile in a deletion request response signal and transmits this signal to the home memory station 120.
